STRUCTURES II, GEOTECHNOLOGY II AND CONCRETE TECHNOLOGY II

June/July 2016 Time: 3 hours

THE KENYA NATIONAL EXAMINATIONS COUNCIL

DIPLOMA IN BUILDING TECHNOLOGY DIPLOMA IN CIVIL ENGINEERING DIPLOMA IN ARCHITECTURE

MODULE II

STRUCTURES II, GEOTECHNOLOGY II AND CONCRETE TECHNOLOGY II

3 hours

INSTRUCTIONS TO CANDIDATES

You should have the following for this examination:

Answer booklet:

Drawing instruments;

Scientific calculator.

This paper consists of EIGHT questions in THREE sections; A, B and C.

Answer TWO questions in section A, TWO questions in section B and ONE question from section C. Relevant tables are included in this paper.

All questions carry equal marks.

Maximum marks for each part of a question are as shown.

Candidates should answer the questions in English.

This paper consists of 6 printed pages.

Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.

SECTION A: STRUCTURES II

Answer any TWO questions in this section.

1. (a) State any three assumptions made in slope and deflection.

(3 marks)

(b) Figure I shows a simply supported beam carrying two point loads as shown:

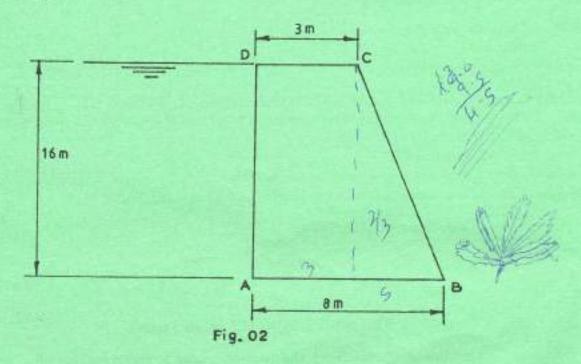

Calculate the deflection of the beam at C and D, using Macauley's method. Take $E = 200 \times 10^3 \text{ N/mm}^2$ and $I = 160 \times 60^6 \text{ mm}^4$. (17 marks)

- 2. (a) With the aid of diagrams, describe the following mode of failure of a retaining wall:
 - (i) overturning;
 - (ii) sliding.

(6 marks)

(b) Figure 2 is a concrete dam of a trapezoidal section, retaining water on one side as shown.

2705/202 2707/202 June/July 2016

2709/202 2710/202

2

Determine:

- the resultant upthrust on the base per metre length; (i)
- the point, where the resultant thrust cuts the base; (ii)
- the intensities of stresses at A and B. (iii)

Take weight of the concrete as 25 KN/m3, the density of water as 1000 kg/m3 (14 marks) and g = 9.81.

- Distinguish between one way spanning slab and two way spanning slab as used in 3. (a) (4 marks) the design of concrete slabs.
 - A one way spanning slab is subjected to an imposed load of 4 KN/m² spans (b) between brick walls as shown in figure 3. Design the slab, using the following information:

 $=35 \text{ N/mm}^2$ $= 460 \text{ N/mm}^2$ =20 mmconcrete cover density of concrete = 24 KN/m3

(16 marks)

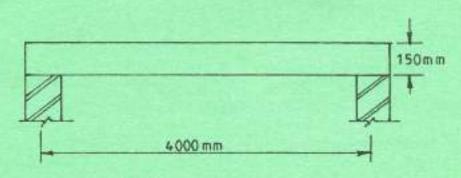

Fig. 03

$$P = 1/2 egh^{2} = 5e = 6.35 + 3675$$

SECTION B: GEOTECHNOLOGY II

Answer any TWO questions from this section.

4./	(a)	ne the following terms as applied to geological structures:								
		(i) faults; -> fractures								
		(ii) folds>u/idu(atur)	(4 marks)							
	(b)	Explain the following physical weathering processes on rocks:								
		(i) temperature;								
		(ii) frost action;	Conference (Confe							
		(iii) decay biogenic product.	(9 marks)							
	(c)	Outline any two geological effects caused by faults.	(7 marks)							
5.	(a)	Define the term quarrying.	(2 marks)							
	(b)	State any five factors to consider when locating a quarry site.								
	(c)	Differentiate between hard and soft rocks.	(4 marks)							
	(d)	Describe the following:								
		(i) weak zone;	(3 marks)							
		(ii) seismic velocity.	(6 marks)							
6,	(a)	State any three purposes of constructing the following:								
		(i) tunnels; The land of the l	(6 marks)							
	(b)	Explain any three geological problems that can be encountered when tunn	elling.							
		Fully Men	(6 marks)							
	(c)	Outline any four factors to consider when selecting a site for a dam.	(8 marks)							
		T-Mess								
		(centr.								
		Services 3º								
		MAL PO TO LIVEY								

SECTION C: CONCRETE TECHNOLOGY II

Answer ONE question from this section.

7, (a)	State any two uses of concreting plants	
--------	---	--

(2 marks)

- (b) Describe the following types of concreting plants:
 - (i) dumpers;
 - (ii) trucker mixers.

(8 marks)

(c) A mixer at a central batching plant has an average output of 90 m³ and is to be used exclusively to fill a mass foundation of 3000 m³ total volume. The round trip including filling and unloading of each dumper with 0.5 m³ concrete is an average of 8 minutes.

Given the following data:

- average capacity of a dumper per trip is 0.5 m³ concrete at 200/= per hour;
- plant operator costs = 50/= per hour;
- working week = 5 days @ 9 hours per day;
- labour for mixing, laying and concreting is encountered elsewhere.

Determine approximate:

- (i) number of dumpers;
- (ii) number of days;
- (iii) cost of using dumper per hour.

(10 marks)

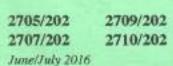

- (a) State any three requirements to consider when providing for joints in a concrete structure.
 (3 marks)
 - (b) With the aid of sketches, describe the following:
 - (i) expansion joints;
 - (ii) contraction joints.

(12 marks)

(c) Outline the procedure of fixing a pre-cast concrete column to a pre-cast pad foundation.

(5 marks)
